Toolisan fertilizing experience by Eike Helmers

Helmers Nurseries, October 2010, Eike Helmers, Grüne Str. 9, D-26655 Westerstede:
www.helters.de

We have tried a lot with TOOLISAN in the field. But also in container cultures, in a pot and substrate for post-fertilization, there were good results.

We were surprised when the TOOLISAN-granules, still wet, lay on hydrangea leaves more than 14 days. This led to no burns.

The knowledge of it: you can deploy the fertilizer with a fertilizer spreader on the tractor in the field and saves a lot of time.

A very healthy plant growth with beautiful color, was found in a test with hydrangeas.

Fertilized roses in the garden had a lot less pest infestation.

A problem had arisen with a bed under a 250-year oak. After fertilization with TOOLISAN Taxus (yew) and Oregon grape (sea buckthorn) developed very well and looked a lot better now.

Privately, there were tests as the palms grow, bloom violets, drives a Ficus and lose less leaves, even the TOOLISAN orchids have been well received and thanked with a new flower.

Other benefits:

TOOLISAN has a neutral, natural look! It leaves no visible splits.

We use TOOLISAN and try continuing in 2011 and we are looking forward to the results.

In summary:

Much tried in the field and fertilizing crops and container to the Potting Substrate

No combusting - even when the "fertilizer granules" where lying in the water on leaves, in the greenhouse over more than 14 days / "floating" / baked.

⇒ Good for outdoor application with fertilizer spreaders on tractor - Labor saving.

Very healthy plant growth was observed (hydrangeas test).

In the garden fertilized Rose had far fewer pests.

A Problem-bed in the front yard under a 250 years old oak has been developed by Toolisan very well. Taxus (yew) and Oregon grape (sea buckthorn) now look

Private: Palm trees grow, violets flowers; Ficus drives and lose less leaves; even the orchids have received Toolisan well and thanked with a new flower.

other advantages:

Toolisan has a neutral natural look!
It leaves no splits (wrappers).

We try out more + more in 2011 and I look forward to the results!

Kindly Regards
