Toolisan - Fertilizer

- Good manure to fertilize again
- Turns into a pleasant brown and bonded with the earth
- Beautiful green color after fertilization
- Keeps the plant healthy and do not powered the culture

We used the fertilizer on our total container surfaces.

The 3-year experience with TOOLISAN shows, it is a good fertilizer also for after fertilizing. It turns into a pleasant brown, and it adheres firmly to the earth.

The plants get a nice green color after fertilization.

The manure gets the plants healthy and do not powered them.

In 2011, we will fertilize also our fields with TOOLISAN.
